

MRK HOTELS

Changes Summary — Reception & Folio, Waiter & Cashier Rounds

v1.1.0 · Edition 1.0 · 15 August 2026

MRK Hotels — Changes Summary:

Reception & Folio, Waiter & Cashier Rounds

One consolidated record of every item worked at code level across the two assessment rounds. Everything is committed and pushed to the repositories, and the regression suites stay green (backend 835 tests / 4,055 assertions; frontend 229 unit tests).

1. Receptionist & Folio round

Answers the reviewer's RECEPTIONIST WORK FLOW AFTER ASSESSMENT plus the FOLIO OPERATIONS ADJUSTMENT follow-up.

#	Issue	What was solved
1	EDIT reservation while not checked in — not live / FOLIO TABLE unchanged	Stay edits re-price the folio live (rate × nights) and refresh the row on save
2	ADD payment before check-in flips RED→GREEN as if checked in	Reserved-and-unpaid guests keep their colour until actually checked in
3	CANCEL/VOID reservation — "NO DASHBOARD AT MANAGER PAGE TO TEST"	Management lands on the stay-view Dashboard at sign-in; void reservation lives there
4	CHECK IN accepts a future-dated reservation	Future-dated bookings cannot be checked in
5	Folio should list every night, not a lump "RENTAL CHARGES"	One line per night ("Room 101 · Rent {date}")
6	All changes live & reflective on a confirmed reservation	Balance re-sums from the live ledger the moment anything changes
7	"THE FIRST BALANCE IS NOT REFLECTIVE"	Strip balance reads the same live ledger arithmetic as the folio card/footer
8	DUE OUT: night-audit ordering + missing purple colour	DUE OUT shows purple automatically from the stay dates
9	Post folio balance to creditors — errors / message confusion	Clear messages: no creditor account configured vs. nothing left to post
10	Amend stay (e.g. add EMAIL) not live	Saving re-fetches the reservation and re-points rows, ledger and Send-invoice
11	Phantom "RENTAL CHARGES" line after editing/voiding room charges	Nights itemised per line; remainder computed live — no duplicate at old price

#	Issue	What was solved
12	Room-charge edits only reflected when CHECKED IN	Non-checked-in folios re-derive balances live too
13	EDIT/VOID room charges management-only, no manager dashboard	manager/accountant/owner only, from their sign-in Dashboard
14	Payment description "edited by "	Reads "Edited by ALLY ATHUMAN"
15	Invoice by e-mail reads as a bare "server error"	Malformed e-mail / server / network failures each get a readable message
16	Discount / negative adjustment increases TOTAL PAID	Total Paid counts money received only; discounts/refunds move balance
17	Viewing one folio zeroes the other / both look clicked	Each switcher row keeps its own balance; exactly one active
18	Payment on a RELATED folio made CURRENT balance negative	Payments (and all entries) post to the folio on screen
19	"REMOVE the RELATED FOLIO chip when TRANSFER FOLIO is used"	Transfer drops the chip (reactive + persisted); split/cut keep theirs
20	Charges/inclusion/discount only touched CURRENT folio after split	All post to the folio being viewed
21	Print invoice auto-downloads	Print opens the print dialog; Download saves the file
22	Invoice has no margins/layout in a new window	A4 with 12 mm margins, hotel name/title, amount table and footer
23	Split bill: two independent invoices printable AND sendable	Each folio row has its own Print and Send
24	After checkout: void reservation management-only	Operators blocked; management uses the stay-view Dashboard
25	After checkout: editing folio operations management-only	Closed folio is final for operators; management can still correct it
26	Folio Operations Adjustment follow-up	All points closed and regression-tested (transfer chip, per-night rows, viewed-folio posting, split totals)

2. Waiter & Cashier / Bartender round

Answers the reviewer's WAITER WORK FLOW ASSESSMENT & NEW RESOLUTION.

#	Issue	What was solved
1	Management page on Restaurant & Bar should resemble the cashier/bartender panel (Order Summary Room Service Delivery Manager) with VOID accessible to management	/cashier opens to hotel_admin and manager; VOID available on settled bills
2	Welcome "USERNAME + CONTINUE" tab is a time-waster	Welcome modal removed
3	Cannot add an order to an occupied table the same waiter occupied	Own occupied tables are selectable
4	Picking menu items first, then a table, resets the picked items	Selection no longer clears
5	Merge items from 2 tables into ONE printable bill	Single merged bill; appears on the side/ table it was transferred to
6	Waiters can set ORDER IS READY / SERVED — should only be RUNNING or SETTLED	START PREPARING, bell, dish, item-advance, VOID and COMPLETE removed from waiters
7	Closed orders: view items + reprint KOT marked CLOSED	Closed orders viewable; KOT reprint watermarked CLOSED ORDER
8	VOID on settled orders (cashier panel, beside reprint, confirm, management-only, reflective after day close)	VOID beside reprint (row + drawer) with confirm + reason; management-only; refunds payment / releases room charge
9	Transferring bar items into restaurant becomes an AUTOMATIC VOID SETTLEMENT	Merged source closes as terminal MERGED (never VOIDED); excluded from all live surfaces
10	LOW STOCK tab not reflective after issuing & accepting an indent (AZAM JUICE reads 0)	Department-aware stock read + refresh event on indent accept
11	Is FAST MOVING ITEMS tab reflective / live?	Reloads on tab entry and refreshes live on order/stock pushes

3. POS Report fix (final round)

#	Issue	What was solved
1	Menu Item Sales Summary shows a raw POSREPORTS.DEPARTMENTS key	departmentLabel() matches the locale map case-insensitively (restaurant/bar) and falls back to the department name for custom departments — group headers and the department filter translate correctly

4. Where the fixes live

Area	Frontend (mrk-hotels-frontend)	Backend (mrk-hotels-api)
Folio / reception	HotelDashboard.vue, router/index.js, folio-ops.spec.js, router-dashboard.spec.js, POS report browser	invoices, folio/charge endpoints (prior rounds)
F&B orders	OrderTakerDashboard.vue, CashierOrderSummaryPage.vue, router/index.js, locales	OrderController, OrderOptions, FbDayClose, Cashier, PosShift, ReportController
Stock (LOW STOCK / indent)	dashboard live-tab wiring	IndentService, ReportController, IndentController
POS reports	PosReportBrowserPage.vue	—

Regression suites stay green after every change: backend **835 tests (4,055 assertions)**, frontend **229 unit tests**; php -l, oxlint and ESLint are clean.
