Front Desk Panel

Problems, Fixes and — Where to Find Them — in the system

A plain-language guide for reception, cashiering and management staff.
Every item from the front desk review, with the screen path to reach the fix.

v1.0.157 · 27 October 2026

REVIEW REPORT

What this document covers

LIVE
v1.0.157

This report follows the original **Front Desk Panel** review. Each issue is shown in three parts:

THE PROBLEM
What was wrong at the desk.

THE FIX
What changed in the system.

WHERE TO FIND IT
The buttons to click in the live system.

How to read the arrow paths

The blue boxes show the order of clicks. Dark blue is where you start; the green box is what you should see or do last.

Dashboard → Room number → Status panel

At a glance

Area	Issues	Result
Dashboard	Guest count, room status, search, nationality, group rooms, calendar	Fixed
Guest page	Alphabet/date filters, searchable city, working export	Fixed
Folio operations	Three-dot actions, Extra Charges, payment labels, balance, automatic tasks	Fixed
Cashiering	Business date sync, creditor filter, corporate payment form, cash drawer	Fixed
Group booking	Payment isolation, individual amend, cancel, room charges	Fixed
Numbering	Folio, room-charge, added-charge and booking references	Fixed
Data & cleanup	Guest-info glitch, remove Send invoice	Partial / Removed

One honest note. The guest-info glitch is the only item that is not fully closed. Group rooms intentionally share one guest profile; the reservation list now reads each booking's own name first. If a non-group booking still shows the wrong guest, send the booking IDs so the remaining record can be traced.

Deployed and verified: frontend v1.0.157 at mrk-hotels.com · API deployment `depl-a3145caf` · 812 frontend tests and 1,122 API tests passing.

1. Dashboard page

The Dashboard is the first screen after login. These fixes cover the guest count, the room-status workflow, search, the new-booking form and the calendar.

1 Guest-in-house count

Fixed Source p.1

THE PROBLEM	The “Guests in house” figure did not follow the booking type, so the total did not match the people actually staying.
THE FIX	The count now uses the party rules: **Single = 1**, **Couple = 2**, **Family = up to 4**, and **Group = 1 guest per room**. It updates from the live in-house stays.
WHERE TO FIND IT	Dashboard → Guests in house (top bar) → Figure updates from in-house bookings

2 Room status and housekeeping

Fixed Source p.1–2

THE PROBLEM	Base statuses and temporary housekeeping states were mixed together. There was no clear way to move a room from dirty to clean, and occupied rooms did not automatically appear for cleaning.
THE FIX	Clicking a room now shows a read-only **Base status** (Occupied, Vacant, Due Out, Reserved, Blocked) and a separate **Housekeeping status** (Clean, Dirty, Blocked). Night audit queues occupied rooms for cleaning. Completing the housekeeping task marks the room clean. Dirty or cleaning rooms are not offered for new bookings.
WHERE TO FIND IT	Dashboard → Click a room number → Base status / Housekeeping status → Housekeeping → Cleaning list → Mark complete

> A room can now be shown as Due Out + Clean, Due Out + Dirty, Occupied + Clean, Occupied + Dirty, or Vacant + Clean.

3 Search across all stays

Fixed Source p.2

THE PROBLEM	Search did not return checked-out guests, so the desk could not find a past stay from the main search.
THE FIX	Search now queries the reservation API for **in-house, checked-out and reserved** stays, then merges the result with the stay board. It matches guest name, booking reference and room number.
WHERE TO FIND IT	Dashboard → Search bar → Type guest name / booking no. / room → Open the matching stay

4 Nationality from country

Fixed Source p.2–3

THE PROBLEM	Nationality was typed by hand even though the country was already selected, so the two could disagree.
THE FIX	Choosing a country now fills nationality automatically. The duplicate free-text city field was removed from the booking form; country and city come from the same searchable selector.
WHERE TO FIND IT	New booking → Country → Nationality fills automatically

4 Group booking rooms

Fixed Source p.3

THE PROBLEM	The + button appeared for single, couple and family bookings. The room list also included rooms that were occupied or reserved.
THE FIX	The + and − room buttons now appear only when **Booking type = Group**. The group room list only offers rooms that are actually sellable for the dates — vacant, not dirty/cleaning, not stop-sell, and not overlapping another stay.
WHERE TO FIND IT	New booking → Booking type: Group → + beside the room number → Choose only an available room

4 Calendar date separators

Fixed Source p.3

THE PROBLEM	The dotted date lines were too strong and distracted from the room bars.
THE FIX	The vertical date separators and room-track lines are now lighter dotted lines, so the calendar reads as a grid without competing with the guest bars.
WHERE TO FIND IT	Dashboard calendar → Date columns → Lighter dotted separators

Already working — checked and kept

Item	What we checked	Where
New Guest button	Opens the guest registration form and saves the guest to the guest list.	Dashboard → New Guest
Business date & calendar	The board follows the business date and the “Back to business date” action returns the calendar to the current date.	Dashboard → Business Date
Guest refresh & search	Refresh reloads the guest table; search returns name, contact and nationality matches.	Guests → Refresh / Search

2. Guest page

The Guest page is the directory of people who have stayed or will stay at the hotel.

4 Guest filters

Fixed Source p.3

THE PROBLEM	The guest list could not be filtered by name letter or by the date the guest was registered.
THE FIX	The Guests page now has an **A–Z alphabet strip** and a **registration date** filter (from / to). Filters can be combined with search.
WHERE TO FIND IT	Guests → Alphabet strip → Registration date filter → List narrows automatically

4 Searchable city

Fixed Source p.3

THE PROBLEM	The city could not be changed to another value, and the dropdown could not be searched.
THE FIX	City is now a searchable dropdown. Type part of the city name to filter it, or choose another city from the list. Country and city stay consistent.
WHERE TO FIND IT	Guests → Add / Edit guest → City → Type to search → choose a city

4 Reliable guest export

Fixed Source p.3

THE PROBLEM	Export failed with **“p is not a function”**, so CSV, Excel and PDF exports did not produce real files.
THE FIX	The PDF table writer was corrected. CSV, XLSX and PDF now export the filtered guest list with the columns currently on screen.
WHERE TO FIND IT	Guests → Export → Choose CSV / XLSX / PDF → File downloads with the current results

3. Folio operations

The folio is the guest’s bill. These fixes make the ledger quieter, make manual charges understandable, and keep payments and balances accurate.

4 Folio action column

Fixed Source p.3–4

THE PROBLEM	Every action was printed side by side in each row, which made the folio ledger crowded and hard to read.
THE FIX	Each ledger row now has a single **three-dot ⋮** menu. Open it to see only the actions that apply to that row: View, Print, Edit, Edit payment, Download or Void/Remove.
WHERE TO FIND IT	Stayview → Folio Operations → Row ⋮ → Choose View / Edit / Print / Void

4 Added charges shown as Extra Charges

Fixed Source p.3–4

THE PROBLEM	Manual Add Charges, Adjustment and Inclusion rows were described as “Room Posting”, which made them look like ordinary room revenue.
THE FIX	Manual charges, adjustments and inclusions now read **EXTRA CHARGES** in the Particular column. The Description column keeps the detail typed by staff, and the row remains editable from the ⋮ menu.
WHERE TO FIND IT	Stayview → Folio Operations → Particular column → EXTRA CHARGES → Row ⋮ → Edit to change it

4 Payment descriptions and identifiers

Fixed Source p.4

THE PROBLEM	Payments did not show which mode was used, so the desk could not tell cash from mobile money or identify the provider.
THE FIX	Payment descriptions now show the method and, where captured, the provider — for example **Mobile money · M-Pesa** or **Mobile money · Tigo Pesa**. Cash, card, bank and other methods are labelled too.
WHERE TO FIND IT	Stayview → Folio Operations → Description column → Read method + provider

4 Transaction reference removed

Fixed Source p.4

THE PROBLEM	The required Transaction Reference field created a red validation tape and blocked quick payment entry.
THE FIX	The field is gone from Add Payment and Edit Payment. The API now accepts payments without a transaction reference, so the desk can record a payment immediately.
WHERE TO FIND IT	Stayview → Add Payment / Edit Payment → No Transaction Reference field → Save

4 Awaiting confirmation removed

Fixed Source p.4

THE PROBLEM	Mobile-money payments sat in “Awaiting confirmation”, which added a red tape and a second step at the desk.
THE FIX	The awaiting-confirmation action was removed. Desk-taken payments are saved as **completed** straight away, so they count in the folio balance immediately.
WHERE TO FIND IT	Stayview → Add Payment → Save payment → Payment is completed

4 Advance payment method

Fixed Source p.4

THE PROBLEM	An advance showed only “Advance paid”, without saying how the money was received.
THE FIX	Booking Details → Payment now shows the advance amount together with the method used, for example **TZS 150,000 · Cash** or **· M-Pesa**.
WHERE TO FIND IT	Stayview → Booking Details → Payment → Advance paid + method

4 Editing a payment updates the balance

Fixed Source p.4

THE PROBLEM	Changing a payment amount or status did not change the guest’s balance due.
THE FIX	Saving an edited payment now moves the reservation’s advance by the same difference, so the folio balance updates. The new amount is capped at the folio total and cannot go below zero. The edit keeps the editor and time in the audit trail.
WHERE TO FIND IT	Stayview → Folio Operations → Payment row ⋮ → Edit payment → Change amount / status → Save → Balance updates

4 Cleaning tasks are automatic

Fixed Source p.4–5

THE PROBLEM	Reception could add cleaning tasks by hand, which let the desk create work that housekeeping had not been told about.
THE FIX	The manual Add Task form was removed. Cleaning tasks are generated automatically at check-out and by night audit. When housekeeping marks the task complete, the room becomes clean and the stay’s Tasks tab shows the updated status.
WHERE TO FIND IT	Housekeeping → Cleaning list → Mark complete → Stayview → Tasks shows the result

4. Cashiering center and cash drawer

Cashiering is where the desk receives payments and settles corporate accounts. It now follows the same business date as the rest of the system.

4 Business date in Cashiering

Fixed Source p.5

THE PROBLEM	The Cashiering Center showed a different business date from the Dashboard.
THE FIX	Cashiering now reads the same shared business-date store as the Dashboard and Night Audit. After a night audit, the date changes everywhere together.
WHERE TO FIND IT	Cashiering Center → Business Date → Matches Dashboard / Night Audit

19 Creditors with a real balance

Fixed Source p.5

THE PROBLEM	Guests with a TZS 0 balance still appeared in the creditor dropdown.
THE FIX	The creditor list now shows only guests with an outstanding balance **above TZS 1**. Zero and fully settled accounts are hidden.
WHERE TO FIND IT	Cashiering Center → Record Payment → Creditors dropdown → Only balances > TZS 1 appear

4 Corporate creditors without a guest list

Fixed Source p.5

THE PROBLEM	Record Payment on a corporate creditor still showed the individual guest dropdown, which made it look like a guest payment.
THE FIX	The corporate creditor settle form hides the individual guest dropdown. You choose the creditor company, see the outstanding balance and receive the payment against that company.
WHERE TO FIND IT	Cashiering Center → Creditors Owed → Settle → No guest dropdown — company only

19 Cash Drawer business date

Fixed Source p.5

THE PROBLEM	The Cash Drawer showed a different business date from the Dashboard.
THE FIX	The Cash Drawer uses the same shared business date as Cashiering, Dashboard and Night Audit, so all four screens agree.
WHERE TO FIND IT	Cashiering / Cash Drawer → Business Date → Matches the Dashboard

5. Group booking

A group booking is one party with several rooms. These fixes keep each room’s money and dates separate while still allowing the group to be managed together.

4 Group payments stay in one room

Fixed Source p.5

THE PROBLEM	A payment received for one room appeared against every room in the group.
THE FIX	The group advance and payment method are now kept on the primary room only. A payment posted from any room’s folio stays with that room and does not fan out to the rest of the party.
WHERE TO FIND IT	Group booking → Open one room → Folio Operations → Add Payment → Only that room’s balance changes

19 Amend one room in a group

Fixed Source p.5

THE PROBLEM	Amending a group stay changed every room, so the desk could not extend or shorten one guest’s stay.
THE FIX	Amend Stay now ticks only the room you opened. Tick more rooms to apply the same dates to them. Unticked rooms keep their current stay and are not released by default.
WHERE TO FIND IT	Group booking → Open the room → Amend Stay → Tick the rooms to change → Save changes

4 Cancel one room or the whole group

Verified Source p.5–6

THE PROBLEM	The group booking could not be cancelled cleanly at individual or whole-group level.
THE FIX	The Cancel Booking dialog offers **individual rooms** and **the entire group**. Choose the rooms to release, or select all to cancel the group. Charges for released rooms are revoked and the rooms are freed.
WHERE TO FIND IT	Group booking → Cancel booking → Choose a room / all rooms → Confirm

> This behaviour is available in the group cancel dialog and was checked during this review. If a property sees a different dialog, send the booking reference so it can be traced.

19 Room charges are no longer TZS 0

Fixed Source p.6

THE PROBLEM	A group reservation showed Room Charges as TZS 0.00 because the shared booking total was being cleared when the rooms were separated.
THE FIX	Each group room now calculates its own nights × rate. The reservation list and folio show a real room-charge figure for every room at the time the group is created.
WHERE TO FIND IT	Group booking → Finish the booking → Reservations → Open a room → Room Charges shows the real total

6. Numbering and identifiers

Every reference should tell staff what it is, which folio it belongs to, and where it sits in the year’s sequence.

4 Folio code format

Fixed Source p.6–7

THE PROBLEM	Folio codes carried the property initials and were not reliably sequential.
THE FIX	New folios use **FLX-2026-00001**: FLX for Folio, the business year, then a five-digit sequential identifier. The property code is removed and the counter is per hotel, per year, under a database lock.
WHERE TO FIND IT	Stayview → Folio header → Folio code: FLX-2026-00001

19 Room-charge code

Fixed Source p.7

THE PROBLEM	Room-charge rows had no consistent identifier that told staff it was a room charge.
THE FIX	Room-charge references now start with **RC** and carry the folio number plus a sequential row number, for example **RC-0001-001A**. The suffix is a check character, not a random value.
WHERE TO FIND IT	Stayview → Folio Operations → Room charge row → Reference starts with RC

4 Added-charge codes

Fixed Source p.7

THE PROBLEM	Added charges, discounts, inclusions and adjustments were not identifiable by type.
THE FIX	The row reference now starts with the correct type prefix: **AC** Added Charges, **DSC** Discount, **INC** Inclusion and **AD** Adjustment. Each has the folio number and a sequential row number.
WHERE TO FIND IT	Stayview → Add Charges / Discount / Adjustment / Inclusion → Save → Row reference starts with AC / DSC / INC / AD

19 Booking code and channel identifier

Fixed Source p.7–8

THE PROBLEM	The booking code was random rather than sequential, and bookings from a channel manager carried no extra identifier.
THE FIX	Booking references are now sequential per hotel and business year, with the hotel code and a check character (for example **BK-MGH-2026-0033V**). A channel manager’s own reference is stored as **external_ref** and shown in Booking Details when supplied.
WHERE TO FIND IT	Reservations → Open a booking → Reference / Source → Booking code + channel reference

7. Data quality and removed controls

Two final items: the guest-information glitch and the circled Send invoice control.

4 The guest-info “glitch”

Partial Source p.8

THE PROBLEM	The same guest information appeared on different bookings even when the booking details were different.
THE FIX	This is **partially fixed**. The reservation list now prefers the reservation’s own guest name instead of the shared guest profile. Group rooms deliberately share one guest profile because they are one party. If a non-group booking still shows the wrong guest, the remaining cause can only be traced with the affected reservation IDs.
WHERE TO FIND IT	Reservations → Open the booking → Guest Details → Check the reservation’s own name

> Please send 2–3 affected reservation IDs (and, if possible, one screenshot of each) if the wrong guest still appears. Without the booking record we cannot safely separate a shared group profile from a genuine data mix-up.

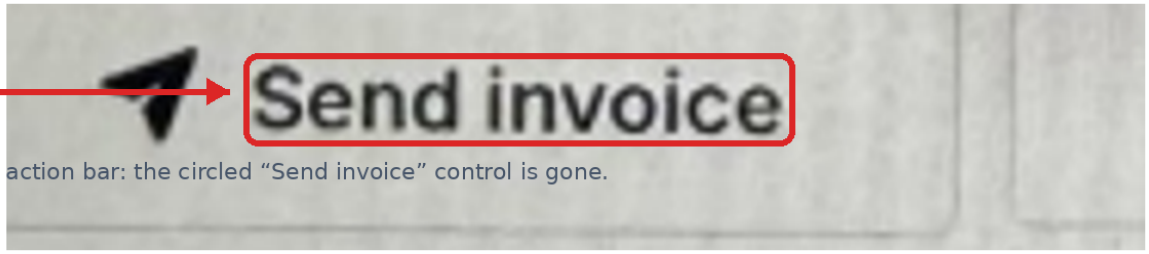

19 Remove the circled items

Fixed Source p.9–10

THE PROBLEM	The circled **Send invoice** control was still present in the Stayview action bar, even though the workflow no longer uses it.
THE FIX	Every Send invoice control was removed: the bottom action bar, the per-row folio actions and the folio modal’s email / SMS send buttons. The invoice can still be previewed and printed.
WHERE TO FIND IT	Stayview → Bottom action bar → Send invoice is gone → Folio modal → Print invoice remains

Removed: the circled Send invoice control

The original review marked the circled **Send invoice** control for removal. It is no longer part of the Stayview workflow.

Old Stayview action bar: the circled “Send invoice” control is gone.

Old Stayview action bar. The circled Send invoice control is removed from the live system.

WHAT WAS REMOVED	The bottom action-bar Send invoice button, the per-row folio send action, and the folio modal’s Send invoice / SMS / Email menu.
WHAT REMAINS	Preview and print of the folio invoice, plus the normal print entry invoice action.
WHERE TO CHECK	Stayview → Bottom action bar → No Send invoice → Folio modal → Print invoice remains

For the technical team

The client guide above is the operational view. This page records where the changes live for support and future maintenance.

Area	Files touched
