WHAT'S NEW
FOR YOUR TEAM

Management Panel & Housekeeping

Your October suggestions, now built into the system

A simple guide prepared for the MRK Hotels team

> Thank you for your October review. We have worked through every point you raised and this short guide explains, in everyday language, what has changed and what you will notice when you use the system.

All done	Fewer steps	Less guesswork
EVERY REVIEW POINT	TO FINISH A TASK	CLEARER SCREENS

1. Choosing your outlet

> **Before:** choosing an outlet didn't seem to change anything, and you were never asked which outlet you wanted to work in.

What's new:

- When you sign in, a friendly window asks which outlet you want to work in.
- Everything you do after that — orders, sales, stock and reports — automatically follows the outlet you chose.
- If the hotel has only one outlet, it is chosen for you.
- You can switch to another outlet at any time from the top of the screen.

2. Rooms blocked from sale

> **Before:** marking a room as "stop sell" didn't actually stop it from being booked.

What's new:

- Blocked rooms now show a clear red "no entry" symbol on the front desk.
- The system will not let a blocked room be booked or given to a walk-in guest.

3. The housekeeping list

What you asked for	What you will see now
See occupied rooms that need cleaning	Occupied rooms show a small cleaning symbol, so staff can see at a glance which rooms need attention.
Clean the busiest rooms first	Rooms where guests have checked out appear at the very top of the list, with occupied rooms just below them.
Flag checked-out rooms for cleaning	When a guest checks out, a cleaning job is created automatically — nothing to remember.
A calendar for the day	A calendar at the top shows today's business date, so the list always matches the day you are working. Change the date to look at another day.
Keep empty rooms out of the way	Empty (vacant) rooms no longer clutter the list. They only appear if a staff member adds one on purpose.
Occupied rooms shown automatically	After the nightly close, occupied rooms are added to the list as needing cleaning, with no manual entry.

4. Simpler statuses and actions

> **Before:** there were too many labels and steps, and the wrong staff names appeared in the dropdown.

What's new:

- The status column now shows just two simple states: **In progress** and **Completed**.
- "Assign to" now reads **Select user**, and only housekeeping staff are listed.
- The **Start** button has been removed — once you assign a staff member, the only next step is **Complete**.
- Pressing **Complete** does everything at once: it records the room as cleaned, makes it ready for the front desk, and records any supplies used.
- A cleaning task for an empty room now starts as **Vacant** by default.
- When a task is completed, the room is automatically marked **Clean** for the front desk.

5. Creating a new cleaning task

What you asked for	What you will see now
Clearer room choices	

What you asked for	What you will see now
	Rooms are labelled in plain words: Vacant, Upcoming arrival, Departure, In house, or Maintenance.
No dates needed for an empty room	For a vacant room you simply pick the room — no dates or times to enter.
Dates filled in automatically	For a room with a guest, the check-in and check-out dates are filled in for you.
Number of nights	The nights are taken from the guest's booking automatically.
Number of guests	Guests are filled in from the booking — a couple booking gives 2, a single gives 1, and a family gives 3 or more.
Only housekeeping staff	The staff list now shows housekeeping team members only.
Only housekeeping supplies	The supplies list shows only items kept for housekeeping.
Fix the "edit task" problem	The issue that stopped edits from saving has been fixed.

5. What we checked

- Every point in your review has been addressed.
- The housekeeping, check-out, night-close and room screens were all tested.
- The main screens were also checked on different screen sizes to make sure everything looks right.
