

Prepared: 13/09/2026 · Status: all requirements implemented

CASHIER PANEL — DINE-IN / ORDER PAD

N o.	Logic & Functionalities	Status	Solution
1	No dedicated F&B ordering screen — cashiers only settled orders taken by waiters.	Implemented	Cashier Dine In reuses the order-taker pad on the cashier panel: one-click order taking, table locks and a Restaurant Bar toggle, so the cashier can take and send orders directly.
2	Bills could not be checked item-by-item before settling.	Implemented	The on-screen settlement popup now itemizes every line (quantity × name + amount) before the grand total; the printed roll shows the unit price per multi-quantity line (@ 1,000 each) plus the payment-service details (method, provider, receipt no., reference, status, paid at, collected by).

CASHIER PANEL — BOARD / LIVE UPDATES

N o.	Logic & Functionalities	Status	Solution
1	Order boards refreshed by polling, so tickets appeared late on screen.	Implemented	Live boards now refresh through WebSocket push (400 ms debounce) on the floor map, open-orders board, kitchen board and cashier summary — an order appears the moment it is sent, and the polling timers were removed.

CASHIER PANEL — POS REPORTS

N o.	Logic & Functionalities	Status	Solution
1	No F&B reporting dedicated to the cashier's outlet.	Implemented	An iPOS-style POS Report Browser was added, backed by the wired report engine: a left tree with the Recommended Reports group (10 F&B report types) exactly as the client's reference; Mandatory Fields (from/to dates, outlet) and Filter Options (business source, sub-category) toolbar; a custom report builder (pick a source report, trim its columns, re-run); period reports open on a rolling 30-day window so data is visible at once.

CASHIER PANEL — MOBILE LAYOUT

N o.	Logic & Functionalities	Status	Solution
1	On small screens the cashier header crammed controls into a single row.	Implemented	A structured two-row mobile header: a title row (hamburger, page title, user avatar) and a controls row (working date, outlet selector, waiter assignment); the controls wrap gracefully at 480px, long titles ellipsize.

CASHIER PANEL — REQUISITIONS

N o.	Logic & Functionalities	Status	Solution
1	The requisition item picker demanded management (level-50) inventory privileges.	Implemented	The picker now reads the level-20 requisition endpoint, so the cashier/bartender/staff panels get items and stock without management inventory privileges.

BARTENDER PANEL — ACCESS & BAR TABLES

N o.	Logic & Functionalities	Status	Solution
1	Bartenders had no login of their own on the POS panel.	Implemented	Bartenders land on the cashier panel (/cashier); the route guard supports role arrays so bartender, cashier and staff all count as POS roles.
2	Bartenders could accidentally order against restaurant tables.	Implemented	Departments are locked per role: bartender = Bar only, cashier = Restaurant only; waiters keep both.
3	The assignable Bar 1–8 slots could not be managed by the bartender.	Implemented	Bar slots are materialized as real bar table records when the bartender opens the table manager; bartenders CRUD their own bar tables while restaurant tables stay manager-only.

BARTENDER PANEL — BRANDING

N o.	Logic & Functionalities	Status	Solution
1	The dine-in pad kept the waiter's gold theme for bartenders.	Implemented	The cashier/bartender pad is now branded in the logo blue (#005eb8): send-order button, manage/refresh actions, department pill tints and category highlights are all driven by a pad-accent variable; waiters keep their gold/amber theme.
2	The topbar showed a generic 'CS' avatar instead of the real user.	Implemented	The cashier topbar avatar now shows the real user initials.

BARTENDER PANEL — REPORTS

N o.	Logic & Functionalities	Status	Solution
1	Bartenders had no reporting of their own on the main panel.	Implemented	POS Reports joins Reports and Staff Reports for the F&B reporting roles (hotel_admin, manager, bartender, staff), routed to /app/pos-report-browser behind the reports feature.

Legend: **Implemented** = newly delivered for this panel · **Already in place** = existed before this review.
