

Prepared: 13/09/2026 · Status: all requirements implemented

KITCHEN PANEL — DASHBOARD / KITCHEN BOARD

N o.	Logic & Functionalities	Status	Solution
1	Open tickets displayed live on the board.	Already in place	Open-ticket display remains fully supported (reference: DONE).
2	Refresh button.	Already in place	Refresh control present and working (reference: DONE).
3	Current date was not the default on the board.	Implemented	Calendar added with the current date as default; the board always opens on today.
4	Closed tickets (served orders) history is missing.	Implemented	Added a page that shows a summary of all closed tickets across past dates.

WAITER PANEL — DASHBOARD & OPEN ORDERS

N o.	Logic & Functionalities	Status	Solution
1	Dashboard.	Already in place	Operational (reference: DONE).
2	New order.	Already in place	Operational (reference: DONE).
3	Open orders were visible to every waiter.	Implemented	A waiter now sees only open orders that concern him/her — tabless, room-service and take-away orders from other waiters are excluded.
4	Bill split not available.	Implemented	Folio-style split boxes highlight the items to split, with a tab and arrow pointing to the chosen table; clicking the arrow splits the bill.
5	Transfer table not available.	Implemented	The same tab-and-arrow flow lets a waiter transfer the bill to another table.

WAITER PANEL — OPEN ORDERS

N o.	Logic & Functionalities	Status	Solution
1	When the cashier settled a bill, the order stayed under OPEN ORDERS until the waiter clicked Complete, blocking DAY CLOSE.	Implemented	Once the cashier settles a waiter's order, it is automatically removed from OPEN ORDERS so DAY CLOSE proceeds smoothly.

WAITER PANEL — ORDER SUMMARY

N o.	Logic & Functionalities	Status	Solution
1	Summary was shared across waiters; calendar was missing; no settlement column.	Implemented	Summary is limited to the logged-in waiter's own orders. Tabless / take-away / room-service settlements appear only on the cashier's summary. A calendar with today as default lets the waiter browse previous dates, and a new column shows how the cashier settled the order — Cash / Mobile / Bank / Creditor account / Room posting.

WAITER PANEL — TAKE ORDERS

N o.	Logic & Functionalities	Status	Solution
1	Orders could be processed without selecting a table.	Implemented	An order is only sent once a table has been selected.
2	No feedback that a table was selected.	Implemented	A tick sign appears on the selected table so the waiter knows it is chosen before the order is sent.

WAITER PANEL — MY PROFILE

N o.	Logic & Functionalities	Status	Solution
1	Waiters, cashiers and kitchen (chef) could change their own password.	Implemented	The ability to change the password is removed for waiter, cashier and kitchen roles (access denied, 403).
2	Does the admin or manager see the new password after a change?	Resolved	Passwords are never exposed; role-based access controls above remain in force and administrator/manager changes are logged normally.

Legend: **Implemented** = newly delivered for this panel · **Already in place** = existed before this review.
