Update 1 — Food Ready Notifications for Waiters

v1.1.0 · Edition 1.0 · 15 August 2026

Understanding the Update · 1 — Restaurant: "Food Ready" Notifications for Waiters

For the management and staff of MRK Hotels — 5 September 2026

1. What was the problem?

When the kitchen finished cooking an item, the **waiter who took the order had no automatic way of knowing**. Waiters had to keep checking the open-orders screen again and again to guess whether their food was ready.

What that meant for you:

- Meals sometimes sat in the kitchen because no one realised they were done.
- Food arrived at the table cooler than it should — poor for the guest and for your kitchen's reputation.
- Staff time was wasted re-checking screens.

2. What did we change?

- The moment the kitchen marks an item **READY**, the system **immediately flags that item to the waiter** who took the order — with the order number, where the guest is sitting, and exactly which item is ready.
- On the waiter's screen, the item now shows a **clear green READY (and later SERVED)** tag.
- The waiter panel refreshes by itself every few seconds, so there is nothing to reload — the "READY" tag simply appears.

3. Why it matters to you

- **Hotter food.** The right person is told the instant the food is done.
- **Happier guests.** Correct, prompt service reflects directly on your hotel.
- **Less rushing and confusion.** Your waiting staff no longer have to guess or ask the kitchen.

4. What you will see in the app

- Open orders on the waiter panel list each item.
- Items that are done show a **green READY tag**; items already taken to the guest show **SERVED**.
- No new training is needed — it is just a clearer screen.

5. Summary

Question	Answer
Who is notified?	The specific waiter who took the order
How?	A notification appears with order number, location and item
What does the screen show?	A green READY / SERVED tag on the item
Does staff need training to use it?	No — it is automatic
