

MRK HOTELS

Update 3 — Reliable Spreadsheet Export

v1.1.0 · Edition 1.0 · 15 August 2026

Understanding the Update · 3 — Housekeeping: A Reliable Spreadsheet Export

For the management and staff of MRK Hotels — 5 September 2026

1. What was the problem?

Downloading the housekeeping task list to **Excel / CSV** produced a messy file: columns did not line up, important details were missing from cells, and the column order seemed random.

What that meant for you:

- Daily reports and handover sheets needed manual fixing before they could be used.
- Managers could not trust the numbers straight out of the download.
- The file was not a proper record of room cleaning status.

2. What did we change?

- The system now prepares the data in a **clean, flat layout** before exporting.
- The export always contains the same **ten well-named columns**, in a sensible order:

Column	What it tells you
Room	Room number
Room type	Single, double, suite, etc.
Pax	Guests currently in the room
Housekeeping status	Clean, dirty, in progress, etc.
Assigned to	Staff member responsible
Room status	Occupied, vacant, arriving today, etc.
Arrival	Guest expected to arrive
Departure	Guest expected to leave
Nights	Length of stay
Status	Task status

3. Why it matters to you

- **Reports you can trust.** The download is complete and correctly aligned, with no hidden or empty columns.
- **Ready-to-use handover sheets.** Print or share the file directly — no rework.
- **Better daily oversight.** One clear snapshot of every room's cleaning and occupancy state.

4. What you will see in the app

- On the **Housekeeping** page, the export button now delivers a tidy spreadsheet every time.
- Nothing else about the housekeeping screen changes.

5. Summary

Question	Answer
Where do I export from?	The Housekeeping task list page (Excel/CSV button)
What will the file look like?	Ten clean, labelled columns in a fixed order
Does it require training?	No — the same button, a better result
Does the format change?	No — still Excel/CSV, just correctly filled
