RESOLUTION REPORT

Management Panel & Housekeeping

Resolution of the October review across the Vue panel and Laravel API

Prepared by MRK Software Engineering · Brand palette **#005eb8** · **#2c3e50**

This report documents every item raised in **“MANAGEMENT PANEL & HOUSE KEEPING OCTOBER RESOLUTION”** and how each was implemented — covering Outlets, Stop Sell, the Housekeeping board, the Status / Action / Room-Status columns, House Status, and the New Task flow. All changes are verified by the API test suite and the frontend lint, build and unit tests.

100%	2	749	#005eb8
REVIEW ITEMS ADDRESSED	REPOSITORIES SHIPPED	FRONTEND TESTS PASSING	MRK BRAND BLUE

1 · Outlets

PROBLEM

Selecting an outlet had no effect, and there was no prompt to choose the outlet a user works in.

SOLUTION

- A branded **post-login outlet gate** opens in the panel shell for every role except reception, mirroring the cashier login.
- Orders, stocks, adjustments and reports follow the shared session selection via `useOutletContext`.
- Single-outlet properties auto-select their only outlet; the header picker stays available to switch later.

2 · Stop Sell

PROBLEM

Setting a room to STOP SELL had no effect on the reception dashboard for new bookings and walk-ins.

SOLUTION

- The rooms API now exposes a `stop_sell` flag (and live availability) on every room.
- The stay-view marks stopped rooms with a red **ban icon** labelled “blocked for sale”.
- Stopped rooms are rejected by availability, vacant-cell and walk-in booking paths.

3 · Housekeeping board

Review point	How it was resolved
Occupied rooms should show an icon that they need cleaning	An occupied-to-clean icon appears on in-house task rows, and the night audit queues a cleaning task per occupied room.
Occupied and checked-out rooms are top priority	Checkout tasks are queued **urgent**; occupied-room tasks are queued **high**.
Checked-out rooms indicated for cleaning	Every checkout queues a cleaning task automatically (room status `checked_out`).
Add a universal calendar (business date default)	A calendar on the housekeeping page defaults to the hotel’s business date and reloads the board on change.
Vacant rooms should not appear unless added manually	The board lists tasks, so vacant rooms appear only after a user creates a New Task for one.
Occupied rooms appear as DIRTY automatically	Night audit queues occupied rooms as `house_status = dirty` for the board.

2.1 · Status column

PROBLEM

The status column carried too many states: DIRTY, VERIFIED and CONFIRMED.

SOLUTION

- Only **In Progress** and **Completed** remain in the status column.
- DIRTY lives in the House Status column; VERIFIED and CONFIRMED are folded into the single COMPLETE action.

3.1 · Action column

PROBLEM
ASSIGN TO said “select room”, listed all users, and required a separate START before COMPLETE.

SOLUTION

- The action now reads **SELECT USER** and lists **housekeeping staff only**.
- The **START** button was removed — assigning leaves the task ready for a single **COMPLETE**.
- COMPLETE folds in all verification and confirmation, marks the room clean, releases it for sale and books supplies used.

4 · Room status & House status

PROBLEM
Unoccupied rooms defaulted to CHECKED OUT; completing cleaning did not flip House Status to CLEAN.

SOLUTION

- The default room status for an unoccupied room is now **VACANT**; a checked-out guest’s room reads **Checked out**.
- Setting progress to **Completed** flips the room’s **House Status to Clean**.

5 · New Task

Review point	How it was resolved
Room categories beyond available / occupied	Rooms are labelled Vacant, Upcoming Arrival, Departure, In House and Maintenance.
Vacant room needs no date / time	Selecting a vacant room skips dates, nights and guests.
Auto-fill dates, nights and guests	Arrival / in-house / departure rooms fill check-in, departure, nights and guests from the booking (couple = 2, single = 1, family = 3+).
Remove the room-status dropdown	The category is derived from the stay and shown read-only.
Assign only housekeeping staff	The assignee list is filtered to the housekeeping role only.
Supplies limited to housekeeping items	The supplies picker reads the housekeeping department’s registered stock.
EDIT TASK fails to save	Fixed: updates persist the assignee and edits without rejecting the payload.

6 · Verification & sign-off

- **API:** PHPUnit suites for housekeeping, checkout, night audit and rooms pass.
- **Frontend:** ESLint clean, production build succeeds, and all 749 unit tests pass.
- **Behaviour:** outlet gate, stop-sell blocking, business-date calendar and New Task auto-fill were exercised end to end.
