MRK HOTELS

Inventory Panel
Problems, Solutions & Status

Implementation reference for the client review document “MRK Inventory Panel — Problems, Fixes and Where to Find Them”. Each row maps a red PDF note to the change made, its status, and where to find it in the panel.

Prepared: 10 November 2026 · **Frontend:** v1.0.164 (a77a722) · **Backend:** 6e2aa54

How to read this document

Status: “Done” means the requested change is implemented and verified in the current code.
Where to find it: the first line is the user-facing panel location; monospace lines are the main code references.
Scope: this document covers the confirmed red handwritten notes on PDF pages 5, 7, 12, 14 and 16. The earlier purchase-order calendar/void fix on page 4 is already part of the same inventory workflow.

1. Goods Received (PDF page 5)

Problem / PDF request	Solution implemented	Status	Where to find it
The goods received list still showed a Purchase Order column.	Removed the PO column from the GRN list table. The PO reference remains on the GRN detail where it belongs.	Done	Inventory > Goods Received > list `src/pages/store/StoreGoodsReceivedPage.vue`

2. Cash Register (PDF page 7)

Problem / PDF request	Solution implemented	Status	Where to find it
The calendar was not visible in the working toolbar, so the register could not be reviewed by business date.	Moved the calendar into the main toolbar. The selected date is sent to the register API and controls the KPI summary.	Done	Inventory > Cash Register > toolbar `src/pages/store/StoreCashRegisterPage.vue`
The summary did not change with the selected date; it always described the currently open shift.	Added a date-aware daily summary endpoint. Opening float, floats added, expenses, sales, expected cash and remaining float now describe the selected day.	Done	Inventory > Cash Register > summary `app/Http/Controllers/Api/V1/Store/CashRegisterController.php`
Added floats and cash expenses were not shown together, so FLOAT minus EXPENSES was not transparent.	Replaced the expenses-only list with a combined Cash Movements table. Floats show as positive, expenses as negative, and the footer shows the net movement.	Done	Inventory > Cash Register > Cash Movements `src/pages/store/StoreCashRegisterPage.vue`

Shift history could show old shifts and had no direct route to the full report browser.	Shift history now requests the last 30 days, up to 100 rows, and includes a View Reports link to the store reports page.	Done	Inventory > Cash Register > Shift History
			`src/pages/store/StoreCashRegisterPage.vue`
			`app/Http/Controllers/Api/V1/Store/CashRegisterController.php`

3. Stock Counts (PDF page 12)

Problem / PDF request	Solution implemented	Status	Where to find it

The count sheet had no description field at the top.	Added a Description textarea bound to the count sheet notes and saved it with the counted quantities.	Done	Inventory > Stock Counts > count sheet
			`src/pages/store/StoreStockCountsPage.vue`
			`app/Http/Controllers/Api/V1/Inventory/PhysicalStockTakeController.php`

Saving a count gave no confirmation and no autosave feedback.	Added a save notice, dirty-input tracking and an autosaved time so the user can see that the count was stored.	Done	Inventory > Stock Counts > save feedback `src/pages/store/StoreStockCountsPage.vue`
Count history used the wrong columns and did not open a detail view.	History now shows Reference, Time, Items and Cost Value. Clicking a row opens a detail modal; search filters the history.	Done	Inventory > Stock Counts > History `src/pages/store/StoreStockCountsPage.vue`

4. Stock Adjustments (PDF page 14)

Problem / PDF request	Solution implemented	Status	Where to find it
Items could not be added with a proper SI unit, so mass quantities were entered as bottles or other base units.	Added SI unit selection per line. Quantities are converted to base units before saving, while the sheet keeps the entered unit and quantity for display.	Done	Inventory > Stock Adjustments > Add Item `src/pages/store/StoreStockAdjustPage.vue`
The quantity removed was not shown in the lines table.	The quantity column now uses Quantity Removed for wastage and consumption, and displays the line's entered unit.	Done	Inventory > Stock Adjustments > lines table `src/pages/store/StoreStockAdjustPage.vue`
The item picker attached stock counts to item labels.	Removed stock counts from the picker. It now lists registered item names, category, SI unit and reference cost only.	Done	Inventory > Stock Adjustments > item picker `src/pages/store/StoreStockAdjustPage.vue`
Unit cost and cost value columns did not calculate correctly.	Each line now calculates unit cost and total cost from the item's reference cost and the selected unit factor.	Done	Inventory > Stock Adjustments > Unit Cost / Cost Value `src/pages/store/StoreStockAdjustPage.vue`
The filter used segmented switch buttons instead of a simple icon toggle.	Replaced the switch buttons with an icon-only void filter toggle.	Done	Inventory > Stock Adjustments > filter icon `src/pages/store/StoreStockAdjustPage.vue`

Saving could fail with a not-enough-stock error that was hard to understand.	The sheet now makes the quantity removed explicit, converts SI units correctly, and shows the backend validation message. Normal save and void flows are covered by tests.	Done	Inventory > Stock Adjustments > Save
			`src/pages/store/StoreStockAdjustPage.vue`
			`app/Http/Controllers/Api/V1/Inventory/StockAdjustmentController.php`

5. Stock Transfers (PDF page 16)

Problem / PDF request	Solution implemented	Status	Where to find it
The outlet dropdown was not based on departments, so outlets without a stock shelf could be selected.	Outlets are filtered to those with a stock department. Labels include the department name, and the backend still enforces the source shelf.	Done	Inventory > Stock Transfers > From/To outlet `src/pages/store/StoreTransfersPage.vue` `app/Http/Controllers/Api/V1/Inventory/StockTransferController.php`
The status filter only offered DRAFT; SENT was missing.	Added All / DRAFT / SENT status filtering. Completed transfers are labelled SENT in the list.	Done	Inventory > Stock Transfers > Status filter `src/pages/store/StoreTransfersPage.vue`
The new transfer form did not follow the purchase-order layout.	Rebuilt the form with the purchase-order multi-line layout, SI unit selection, computed unit cost and line totals.	Done	Inventory > Stock Transfers > New Transfer `src/pages/store/StoreTransfersPage.vue`
The list table had too many columns and showed row actions outside the detail view.	The list now shows only the clickable S/N reference, Status and Cost Value. Actions live inside the detail modal.	Done	Inventory > Stock Transfers > list `src/pages/store/StoreTransfersPage.vue`
Print, share, send and void actions were not clearly available from the transfer detail.	The detail modal now contains Print, Share, Send and Void actions, with print signatures and a void reason modal.	Done	Inventory > Stock Transfers > detail modal `src/pages/store/StoreTransfersPage.vue`

Verification

Area	Check	Result
Frontend	Targeted inventory tests (stock adjustments, GRN, purchase orders)	19 passed
Frontend	Full Vitest suite	803 passed, 13 unrelated failures
Frontend	ESLint and Oxlint on changed files	Passed
Frontend	Production build	Passed
Backend	InventoryTransactionsTest and StorePosModuleTest	24 passed, 172 assertions
Backend	Full PHPUnit suite	1128 passed, 5136 assertions

Known unrelated frontend failures

These failures predate this inventory review and are outside its scope. They are listed for transparency.

System	Failing spec	Count
Frontend	`amend-group.spec.js`	4
Frontend	`folio-ops.spec.js`	2
Frontend	`group-booking-room-picker.spec.js`	2
Frontend	`hotel-dashboard-management-band.spec.js`	3
Frontend	`room-occupancy.spec.js`	2
