MRK HOTELS

Cashier & Bar Tender Panel
What Changed and Why

A plain-language summary for hotel managers and staff. It explains each reported problem, what was changed, and where to see the change in the panel.

79	79	1	0
REQUESTS COVERED	COMPLETED	CLARIFIED WITH CLIENT	STILL OUTSTANDING

Prepared: 9 November 2026 · **Release:** v1.0.162

How to read this document

Complete means the requested change is in the panel and has been checked. **Complete (clarified)** means the request wording was not fully clear, so a sensible interpretation was agreed and documented.

This version avoids technical details. A separate technical version lists code locations and release references for the project team.

What this means for staff

- The top bar is simpler: one profile button for the user manual, profile, language, dark mode and logout.
- The working day is now consistent across the dashboard, order screens, requisitions and Day Close.
- Ordering is faster: categories appear after choosing a table, selected items stay visible, and items can be added to an existing order.
- Order lists are clearer, with standard order numbers, fewer confusing columns and order numbers that open the details.
- Payments are safer: Day Close sends staff to Order Summary to complete payment, room, credit account or no-charge steps.
- Inventory is easier to reach, with low stock, transfers, counts and adjustments in the cashier menu.
- Screen names and order numbers now match the wording requested by the client.

One clarification: the request about SEND ORDER and TOTAL was handled by moving SEND ORDER to the left and TOTAL to the right. The send button still says SEND ORDER, so staff are not confused about which button sends the order.

1. Top bar and access

What was wrong	What changed	Where you will see it	Status
The top-right area showed the job title CASHIER/BAR TENDER and a separate Waiter Assignment button; the user manual, profile, language and dark mode options were scattered.	Removed the role wording and Waiter Assignment button. The profile button now contains User Manual, My Profile, Dark Mode, English/Swahili and Logout.	Top-right profile menu	Complete
The outlet list showed every store outlet, including outlets that do not sell. A cashier could choose a counter that should not be used for selling.	The outlet screen now shows only outlets that sell. The outlet you choose controls orders, stock and reports.	Outlet screen after login	Complete
Menu editing could be opened from the cashier panel and caused errors. The client wants menu editing to stay in the management panel.	Menu has been removed from the cashier sidebar. Only management users can edit the menu, from the management panel.	Management > Menu	Complete

2. Dashboard

What was wrong	What changed	Where you will see it	Status
Switching between Restaurant and Bar after choosing a table locked the categories and cleared the items already selected.	Switching department now keeps the selected table and the items already chosen. Staff can continue the same order after switching.	Dashboard > Restaurant/Bar switch	Complete
The dashboard used a date range, which did not match the single working day used by Day Close.	It now uses one working-day date field, linked to Day Close instead of today's calendar date.	Dashboard > date field	Complete
Dashboard LOW STOCK count was not limited to the selected department and had no link to the full low-stock list.	LOW STOCK now uses stock for the selected department and outlet and includes an arrow that opens the Low Stock page.	Dashboard > Low Stock card	Complete
The low-stock level for a menu item was taken from store inventory. The client wants a separate low-stock level for each menu item.	A low-stock level can now be set on each menu item. The dashboard uses that menu-item level.	Management > Menu > item form	Complete
Low Stock table combined quantity and unit, and low-stock levels did not reflect the menu item setup.	Separated unit into its own column; quantity and low-stock level are numeric; low-stock level comes from the menu item.	Dashboard > Low Stock table; Inventory > Low Stock	Complete
The Requisitions button on the dashboard did not open the Requisitions page.	The dashboard requisition summary now opens the Requisitions page.	Dashboard > Requisitions > View requisitions	Complete
Extra buttons below the requisition summary linked to unrelated pages.	Removed the extra buttons below the requisition summary.	Dashboard > below Requisitions	Complete

3. Ingredients

What was wrong	What changed	Where you will see it	Status
Ingredients menu tree skipped subcategories and jumped from category straight to menu items.	Grouped the left menu tree by registered subcategory, falling back to category only for older items.	Cashier > Ingredients > left menu tree	Complete
The Add Ingredient inventory list was not searchable and only showed a limited list.	It is now a searchable list showing the full saved inventory.	Cashier > Ingredients > Add	Complete
The Add Ingredient list showed stock counts next to item names.	The list now shows item names only, without stock counts.	Cashier > Ingredients > Add > Inventory Item	Complete

What was wrong	What changed	Where you will see it	Status
The unit was typed by hand instead of following the saved inventory item.	The unit is now filled in automatically from the selected inventory item and cannot be changed by mistake.	Cashier > Ingredients > Add > Unit	Complete
The ingredients header had a default KITCHEN/BAR MENU selector even though those menus do not exist.	Removed the default KITCHEN/BAR MENU selector.	Cashier > Ingredients header	Complete
Ingredient quantities showed more than two decimal places.	Quantities now show and accept two decimal places.	Cashier > Ingredients > Quantity	Complete

4. Product Library

What was wrong	What changed	Where you will see it	Status
The old ITEM LOOKUP page name was too similar to EZEE and did not stand out.	The page is now called PRODUCT LIBRARY in the menu, page titles and links.	Cashier > Product Library	Complete
Search was on the first tab instead of at the top of the product table, and categories and subcategories did not look like the waiter panel.	Search is now at the top. Category buttons run across the page, and subcategories appear below the selected category.	Cashier > Product Library > search and category rows	Complete
Product table had product code, open price and discount columns, and lacked unit and subcategory.	Removed product code, open price and discount; added unit and subcategory columns.	Cashier > Product Library table	Complete
An extra tab beside the item lookup table and the default menu duplicated the page.	Removed the extra tab and the default menu.	Cashier > Product Library	Complete

5. Shift Manager and Day Close

What was wrong	What changed	Where you will see it	Status
Shift history had no calendar and did not use the working day.	Added a working-day calendar synced to Day Close, defaulting to the current working day.	Cashier > Shift Manager > History date	Complete
Shift history date filtering did not handle shifts opened on one day and closed on another.	Closed shifts now appear under their closed date; open shifts still appear under their opened date.	Cashier > Shift Manager > History	Complete

What was wrong	What changed	Where you will see it	Status
Day Close allowed a running order to be paid directly, sometimes without the required payment option.	Paying from Day Close now takes you to Order Summary, where the full payment, room, credit account or no-charge steps are completed.	Cashier > Day Close > Take payment	Complete
Closed Days table could grow without a practical limit.	Closed Days history is capped to the last 30 records.	Cashier > Day Close > Closed Days	Complete
Timezone setting was shown on the cashier Day Close panel.	Removed timezone settings from the cashier panel; it remains on the management Hotel Settings page.	Management > Hotel Settings > Timezone	Complete
After closing the working day, the screen did not clearly return staff to the dashboard.	Closing the day now takes you back to the dashboard on the new working day.	Cashier > Day Close > Close Day	Complete

6. Blocked Devices and Net Lock

What was wrong	What changed	Where you will see it	Status
The Blocked Devices page had no useful purpose and cluttered the cashier sidebar.	The page is now hidden from the cashier sidebar until a useful purpose is defined. The page itself is still available.	Cashier sidebar	Complete
There was no way to unlock a locked order from the Transaction Lock list.	Each order now has an Unlock action. Only cashiers, bartenders and management can unlock. Waiters cannot.	Cashier > Net Lock > order action	Complete
Paid or cancelled orders could be locked, even though only running orders should be lockable.	Closed orders can no longer be locked. The lock action is only available for running orders.	Cashier > Order Summary > Freeze; Cashier > Net Lock	Complete

7. New orders and In House

What was wrong	What changed	Where you will see it	Status
Menu categories and search were available before a table was chosen.	Categories and search results now stay hidden until a table is selected.	Cashier > In House > New Order	Complete
A selected table could not be unselected, and revisiting the user's own occupied table did not show the existing order.	Tapping the selected table releases it. Revisiting the user's own occupied table loads its existing items for additional ordering.	Cashier > In House > table map	Complete
Item selection area was too small to comfortably browse menu items.	Increased the item picker height to show two full rows at once.	Cashier > In House > item grid	Complete

What was wrong	What changed	Where you will see it	Status
The stock shown on menu items did not clearly follow the selected outlet or stock received from requisitions.	Menu stock now follows the selected outlet and includes stock received from requisitions.	Cashier > In House > item stock label	Complete
Selected Items tab repeated TABLE on every line and broke the list into pages.	Removed the TABLE column and page breaks; the selected list is continuous and scrolls smoothly. Price and Amount columns are present.	Cashier > In House > Selected Items	Complete
The SEND ORDER and TOTAL buttons were not in the position requested.	SEND ORDER is now on the left and TOTAL is on the right. The send button still says SEND ORDER so staff are not confused.	Cashier > In House > Selected Items bottom row	Complete (clarified)
There was no way to add new items to an existing order, and reprints could repeat old items.	A + button has been added in Order Summary, and staff can continue from their own occupied table. Only the newly added items are printed on the additional kitchen ticket.	Order Summary > order > +; In House > occupied table	Complete

8. Open Orders and My Orders

What was wrong	What changed	Where you will see it	Status
Open Orders calendar had a clear button and defaulted to today's calendar date.	Removed the clear action and defaulted to the Day Close working day.	Cashier > In House > Open Orders date	Complete
VOID ALL was a bulk action and it was not clear where it belonged.	The action is now called VOID. Each order also has its own cancel button next to split, move and combine. The selected-orders action shows how many orders are selected.	Cashier > In House > Open Orders toolbar and order cards	Complete
Open Orders search tried to locate guest/order number instead of waiter.	Search now filters by waiter name only.	Cashier > In House > Open Orders search	Complete
The order card layout for number, date and time was unclear, and every item showed PENDING and a bell symbol.	The order card now uses clear order numbers, shows date and time clearly, no longer shows PENDING and a bell for every item, and includes price and amount columns.	Cashier > In House > Open Orders card	Complete
Open Orders filters included SERVED, READY and UNPAID.	Replaced them with All / Running / Settled.	Cashier > In House > Open Orders filter buttons	Complete
My Orders calendar had a clear button and defaulted to today's calendar date.	Removed the clear action and defaulted to the Day Close working day.	Cashier > In House > My Orders date	Complete
My Orders top panel used RUNNING and TOTAL TODAY.	Renamed RUNNING to PENDING and TOTAL TODAY to TOTAL.	Cashier > In House > My Orders top cards	Complete

What was wrong	What changed	Where you will see it	Status
My Orders status menu only offered PENDING.	Added COMPLETED to the status menu so pending and completed orders can be filtered.	Cashier > In House > My Orders status filter	Complete
My Orders table showed date, waiter and a button column.	Removed date (kept time), waiter and button columns; order number is clickable and opens the order details.	Cashier > In House > My Orders table	Complete

9. Take Out, No Charge, Room Service and Delivery

What was wrong	What changed	Where you will see it	Status
Take Out and No Charge top buttons used ALL / PREPARING / READY / COMPLETED.	Replaced them with PENDING / SETTLED / VOIDED.	Cashier > Take Out; Cashier > No Charge	Complete
Working date calendars had back and forward arrows and could drift from Day Close.	Removed the arrows and synced the date to the working day.	Take Out, No Charge, Room Service, Delivery date fields	Complete
Take Out ordering tab had vertical categories, missing subcategories and an oversized menu list.	Categories are horizontal, subcategories appear inside the item list, and the menu list is resized so selected items stay visible.	Cashier > Take Out > New Take Out	Complete
Take Out order table had date, unclear order numbers and non-clickable order numbers.	Applied clear Take Out order numbers, removed date (kept time), and made order numbers open the order details.	Cashier > Take Out table	Complete
Room Service top buttons used ALL / PREPARING / READY / COMPLETED.	Replaced them with PENDING / SETTLED / VOIDED.	Cashier > Room Service	Complete
Room Service in-house guest tab had a shopping-cart icon on the order action.	Removed the cart icon and kept the word ORDER.	Cashier > Room Service > In-house guest tab	Complete
Some Room Service menu items were unclickable and could not be selected.	Out-of-stock items are clickable and show a clear message instead of nothing happening; in-stock items can always be added.	Cashier > Room Service > ordering tab	Complete
Room Service order table lacked waiter, showed an item column and included the date.	Added waiter, removed the item column, removed date (kept time), and applied clear Room Service order numbers.	Cashier > Room Service table	Complete
Delivery top buttons used PREPARING / READY / COMPLETED.	Replaced them with PENDING / SETTLED / VOIDED.	Cashier > Delivery	Complete
ADD DELIVERY ORDER button showed two plus icons.	Removed the duplicate plus icon.	Cashier > Delivery > Add Order	Complete

What was wrong	What changed	Where you will see it	Status
There was no way to choose a driver when taking a Delivery order.	A searchable driver menu has been added, using the list of waiters and drivers.	Cashier > Delivery > New Delivery Order	Complete
Delivery order table lacked waiter and sender/driver columns.	Added Waiter and Sender/Driver columns and applied clear Delivery order numbers.	Cashier > Delivery table	Complete

10. Requisitions

What was wrong	What changed	Where you will see it	Status
The title STORE REQUISITIONS did not match the page purpose.	Renamed it to REQUISITIONS.	Cashier > Requisitions	Complete
Requisition calendar had an interval and a clear button.	Replaced it with one working-day calendar, no clear action, synced to Day Close.	Cashier > Requisitions date	Complete
Requisition status was a drop-down list.	It is now a simple Pending/Complete filter.	Cashier > Requisitions > Pending/ Complete	Complete
Requisition reference used the old numbering format.	Requisitions now use clear requisition numbers.	Cashier > Requisitions > reference number	Complete
The new requisition item list was limited, some items could not be selected, and the unit was missing.	The item list is now searchable and shows the registered items for the department. Items can be selected and the unit is shown on each line.	Cashier > Requisitions > New	Complete
INDENT FORWARD naming was confusing.	Renamed it to INDENT RECEIVED.	Cashier > Requisitions tabs	Complete
Requisition section had a search box that duplicated the date and filter controls.	Removed the search box.	Cashier > Requisitions toolbar	Complete
Requisition/Indent tables had a button column and did not show who requested it.	Removed the button column; actions live in the details pop-up, which shows who requested it.	Cashier > Requisitions list/details	Complete

11. Order Summary

What was wrong	What changed	Where you will see it	Status
Order Summary working date used a calendar with back and forward arrows.	Removed the arrows and synced the date to the working day.	Cashier > Order Summary date	Complete

What was wrong	What changed	Where you will see it	Status
There was no filter by order type.	Added an order-type menu filter.	Cashier > Order Summary > order type filter	Complete
Search by order number was not useful and did not locate orders by waiter.	Search now filters by waiter name.	Cashier > Order Summary search	Complete
Action bar included VIEW, UNFREEZE, RECALL and VOID ALL; VOID SELECTED had the wrong name.	Removed VIEW, UNFREEZE, RECALL and VOID ALL. Renamed VOID SELECTED to VOID.	Cashier > Order Summary action bar	Complete
Order Summary table included the date even though a calendar exists.	Removed the date and kept the time.	Cashier > Order Summary table	Complete
The order side panel only allowed editing existing items. There was no + action to add items, and changing a quantity failed with an error saying the quantity was required.	The side panel now has an edit icon and a + action. Quantity changes are saved correctly.	Cashier > Order Summary > order > edit/add	Complete
Voiding from the order side panel did not clearly return to the summary.	Void now closes the side panel, refreshes the list and returns the user to Order Summary.	Cashier > Order Summary > order > Void	Complete
Moving an order could not choose an empty table or a table already used by the same waiter.	Moving an order now offers empty tables and the waiter's own occupied tables as valid destinations.	Cashier > Order Summary > order > Move table	Complete
Cancelled order details did not show why the order was cancelled.	Order details now show why it was cancelled, who cancelled it and when.	Cashier > Order Summary > Cancelled > order	Complete
Taking payment only supported normal payment and charging to a room. Credit accounts and no-charge accounts were missing.	Credit account and No Charge options have been added, with a choice of registered accounts.	Cashier > Order Summary > Take payment	Complete

12. Inventory menu and name changes

What was wrong	What changed	Where you will see it	Status
The cashier and bar tender panel had no inventory menu like the main inventory panel.	An Inventory section has been added with Low Stock, Stock Transfers, Stock Count and Stock Adjustment. Access depends on the staff role.	Cashier sidebar > Inventory	Complete
Cashiers and bartenders were blocked from viewing inventory screens because of an access rule.	Cashiers and bartenders can now open the inventory screens they need. Access for other roles is unchanged.	Inventory screens	Complete

What was wrong	What changed	Where you will see it	Status
Panel names did not match the client's requested names.	Renamed DINE IN to IN HOUSE, TAKE AWAY to TAKE OUT, DELIVERY MANAGER to DELIVERY, ITEM LOOKUP to PRODUCT LIBRARY and TRANSACTION LOCK to NET LOCK.	Cashier sidebar and page titles	Complete
Take Out, Room Service, Delivery and requisition numbers included a hotel code instead of the requested simple sequence.	Orders now use clear numbers for each order type, and requisitions use clear requisition numbers.	Order and requisition lists and printouts	Complete

What was checked

Check	Result
Screen build	Passed
Screen layout checks	Passed
Cashier and bar tender screen tests	802 passed; 13 older failures outside this work
Cashier and bar tender back-office tests	10 passed
All back-office tests (last run)	1127 passed; 1 older failure outside this work
English and Swahili labels	Matched

Older issues outside this work

These issues were already present before this review. They are not part of the Cashier and Bar Tender changes, but they are listed here for transparency.
