

PREPARED FOR THE MANAGEMENT OF MRK HOTELS

What We Need From You to Finish Go-Live

Booking.com via the STAAH Channel Manager · Automated Guest SMS · Live Connectivity

From your development team — the last steps are mostly on your side

v1.1.0 · 15 August 2026

The MRK Hotels software is largely built and running, and we are close to finishing the last mile. Most of the technical groundwork — the channel-manager integration, the messaging system, the live server — is **already in place and being tested**. The items in this document are what we still need to finish and go live. Each one requires something only you can provide: an **authorization**, a **credential**, or a **funding decision**. Once each item is provided, we estimate completing the remaining work straight away — we will keep you informed of progress as we go.

ITEMS NEEDED FROM YOU

02 · Why We Recommend STAAH (and Not the Current eze Setup)

A quick note for context: your hotel currently runs on **eze**. We are not suggesting you abandon it — eze can keep handling the daily operations it already manages well. What we are adding is a **channel manager**: a separate service whose only job is publishing your rooms online and collecting the bookings. Here is why we recommend STAAH for that job.

1. **Booking.com only works through certified channel managers.** Online booking sites do not accept data directly from just any system. STAAH is a certified channel manager connected to **200+ channels** (Booking.com, Expedia, Airbnb and many more). One STAAH connection therefore opens the door to many booking sites, not just one.
2. **STAAH has an open, documented connection that our system plugs into.** This is the part that matters most. STAAH publishes a standard connection that our system is already built and tested against, so prices and availability can flow from the hotel to Booking.com automatically, and bookings can flow back in — without anyone typing them in by hand. eze's own distribution tools are designed to be driven by eze itself, which does not give us the same clean, open connection to an external system.
3. **One system stays in charge of your inventory.** With STAAH, the hotel's own system remains the single source of truth for rooms and prices, and STAAH only mirrors that data to the channels. This avoids two systems fighting over the same rooms — which is exactly how overbookings happen.
4. **Cost-effective.** STAAH runs at roughly **\$70-80 per month, per hotel** — noticeably less than the premium channel managers, and you only pay while you use it.
5. **Simple for your team.** No new software, no new hardware, no staff training. STAAH works with the rooms and rates you already have; the mapping form in this document is the extent of your involvement.

6. **Purpose-built and widely used.** STAAH does one thing — hotel distribution — and is used by many hotels in the region. For the task of getting this hotel live on Booking.com automatically, it is the cleanest and most direct route we found.

In short: ezeel stays in place, STAAH is added as the distribution bridge, and our system connects to STAAH. The items below are the small steps needed to switch that bridge on.

01 · Your Part — What We Need From You

1 · STAAH Channel-Manager Subscription & Connectivity Agreement **ESSENTIAL**

YOU PROVIDE	Sign the STAAH connectivity agreement and authorize the subscription payment (~\$70-80 per month, per hotel). You pay STAAH directly; we handle everything technical.
WHY IT MATTERS	STAAH is the certified bridge that lets Booking.com talk to the hotel system. Until an agreement is active, STAAH cannot issue our live API key or property IDs , so we are limited to their free simulator and no real booking can flow.
UNLOCKS	✓ Live rates & availability pushed to Booking.com automatically — bookings land straight in the system.

2 · Booking.com Access for Room & Rate Mapping **ESSENTIAL**

YOU PROVIDE	Authorization for STAAH to mirror your Booking.com rooms and rate plans (they will guide you — usually a short extranet step on your side).
WHY IT MATTERS	Booking.com only accepts data through certified channel managers. STAAH must be able to read your current room setup to publish the correct prices and avoid overbookings and pricing errors .
UNLOCKS	✓ Accurate, live listings; every Booking.com booking appears in the system instantly.

3 · SMS Credit Funding (Africa's Talking) **ESSENTIAL**

YOU PROVIDE	Fund the messaging account used by the hotel — from ~\$10, charged per message sent. The account is operated by your developer (mrkhotelsuperadmin).
WHY IT MATTERS	The account currently has zero balance , so automated guest messages — booking confirmations, check-in reminders, checkout thank-yous — are failing with "Insufficient Balance".
UNLOCKS	✓ Automated guest SMS starts working as soon as the balance is added.

4 · Room & Rate-Plan Mapping Decisions **ESSENTIAL**

YOU PROVIDE	For each hotel going live first: which STAAH/Booking.com room code and rate plan matches each room type in the system (e.g. "Double" → "DBL", plan "BAR"). A short one-page list from your side.
WHY IT MATTERS	The system cannot publish availability or prices until it knows the correct mapping. A wrong mapping means wrong prices or rooms shown as sold out .
UNLOCKS	✓ We configure the mapping in hours and each hotel can go live within days.

6 · STAAH Server Whitelist AFTER ITEM 1

YOU PROVIDE	Simply approve it — once the agreement (item 1) is active, STAAH performs the whitelist of our production server's address for us.
WHY IT MATTERS	STAAH rejects data from non-whitelisted servers. This final step lets the automatic daily sync (availability, rates, restrictions) run on schedule with no manual intervention.
UNLOCKS	✓ Always-fresh availability on every channel, hands-free.

03 · How to Do Each Item — Step by Step

This section walks you through every single step, assuming no technical experience. Work through one item at a time, and if anything looks different from what is described here, do not worry — just send a screenshot to your developer and they will help you.

Before you start — things you will need:

- A computer or smartphone with an internet connection.
- A web browser — Chrome, Safari, Edge or Firefox (the app you use to visit websites).
- Your email address and access to your inbox (you will receive confirmation emails).
- Your hotel's name and business registration details (you may be asked for them).
- A payment method — debit/credit card or mobile money (for the small fees).
- Your Booking.com login details (email + password).
- A pen and paper (or your phone's notes app) to write down passwords and room names.

1 · STAAH Subscription & Agreement **ESSENTIAL**

Step 1 — Ask your developer for the sign-up link

1. Send your developer a message: "I'm ready to start STAAH. Please send me the sign-up link and instructions."
2. They will reply with a link (or tell you to contact STAAH directly). If they send a link, keep it somewhere safe.

Step 2 — Open the sign-up page

1. Open your web browser.
2. Click the link your developer sent you, or type the STAAH website address into the top bar of your browser and press Enter.
3. Wait for the page to load — you should see the STAAH logo and a menu.

Step 3 — Start your registration

1. Look for a button that says **"Sign Up"**, **"Get Started"**, **"Register"** or **"Create Account"**.
2. Click it. A form will open.

Step 4 — Fill in the form

1. Fill in every box: hotel name, contact person's name, email address, phone number, country, number of rooms.
2. Use a real email address you check daily — STAAH will send confirmations there.
3. Fields marked with a red asterisk (*) are required and cannot be left empty.
4. If you make a mistake, the page will usually show a small red message telling you which box to fix. Correct it and continue.

Step 5 — Choose your plan and hotels

1. You will be shown pricing plans. Choose the plan for a hotel (roughly **\$70-80 per month per hotel**).
2. If more than one of your hotels is going live, select each one; you can start with one hotel if you prefer.
3. If you are unsure which plan to pick, choose the standard/smallest plan — your developer can advise.

Step 6 — Agree to the terms

1. Read the terms / connectivity agreement. You do not need to understand every legal word.
2. Tick the checkbox that says **"I agree to the terms and conditions"**.
3. Click **"Submit"**, **"Register"** or **"Continue"**.

Step 7 — Create your password

1. STAAH may ask you to create a password, or email you a temporary one.
2. If you are setting your own, choose something you do not use anywhere else (e.g. a mix of letters and numbers).
3. Write the password down in your notes — you will need it again.

Step 8 — Sign the contract

1. Check your inbox (and spam folder) for an email from STAAH with the subject something like "Action required" or "Sign your agreement".
2. Open the email and click the link. It may open a signing service (DocuSign or similar).
3. On the signing page, click each highlighted box to sign — you can usually just type your name and click **"Sign"**.
4. Click **"Finish"** or **"Complete"** at the end.

Step 9 — Pay

1. STAAH's email will explain how to pay — usually by card or bank transfer.

2. If paying by card: click their payment link, enter your card number, expiry date and security code, then click "**Pay**".
3. If paying by bank transfer: follow the bank details in the email. Note the reference number they ask for.
4. Keep the payment confirmation (email or screenshot).

Step 10 — Confirm with your developer

1. Forward the STAAH confirmation email to your developer (or forward your payment receipt).
2. Tell them: "STAAH is done on my side."
3. They will contact STAAH to collect your **live API keys** — no further work from you.

If STAAH does not reply, email their support and copy your developer. Keep every email from STAAH — do not delete them.

2 · Booking.com Room & Rate Access **ESSENTIAL**

Step 1 — Get your Booking.com login ready

1. Your Booking.com extranet login is the email and password you use to manage your hotel on Booking.com.
2. If you do not have one, email or call your Booking.com account manager and ask: "Please reset my extranet login for our property."

Step 2 — Log into the extranet

1. Open your browser and go to **admin.booking.com**.
2. Type your email and password into the login boxes and click **"Log in"**.
3. If you forgot the password, click **"Forgot password?"** and follow the email reset steps.

Step 3 — Understand your dashboard

1. After login you will see the hotel dashboard with a menu on the left or top: Property, Rates, Calendar, Rooms & Prices, etc.
2. You do not need to click anything yet — just confirm you can see this dashboard.

Step 4 — Let STAAH connect

1. Tell your developer: "I'm logged into Booking.com, ready for the connection."
2. STAAH will email you a link to authorize the connection, or your developer will pass it to you.
3. Open the link. It may ask you to log into Booking.com again — do so.

Step 5 — Approve the connection

1. A page will describe STAAH connecting to your property.
2. Click **"Authorize"**, **"Approve"**, **"Allow access"** or **"Connect"**.
3. You may then see your rooms and rates listed — review them and click **"Confirm"**.
4. You should get a green "success" or "connected" message.

Step 6 — If anything looks wrong

1. If you see an error like "not authorized" or "connection failed", take a screenshot (press **PrtScn** on a computer, or the side buttons on a phone).
2. Send the screenshot to your developer with the message: "This happened when connecting Booking.com."
3. Sometimes the extranet needs you to search for "Connectivity" in its menu to add a channel manager. If you cannot find it, ask your Booking.com account manager: "Please enable connectivity for a certified channel manager (STAAH)."

You are not changing prices or rooms here — you are only allowing STAAH to read them.

3 · SMS Credit Top-Up **ESSENTIAL**

Option A — Let your developer do it (recommended, easiest)

1. Send your developer a message: "Please top up the SMS account. Tell me how much to reimburse."
2. They will reply with the amount needed (from about **\$10**).
3. Reimburse them however you normally pay them (cash, mobile money, bank transfer).
4. Your developer tops up and confirms when it is done. You do nothing else.

Option B — Do it yourself (if you prefer to pay directly)

1. Ask your developer for the Africa's Talking login details, or the payment link they send you.
2. Open your browser and go to **account.africastalking.com**.
3. Type your username and password and click "**Log in**". (If you have no password yet, ask your developer — they created this account.)
4. On the dashboard you will see a menu on the left or top. Click "**Payments**" (it may be under "Billing").
5. Click "**Add Credit**" or "**Top Up**".
6. Type the amount (from **\$10**) and confirm the number.
7. Choose your payment method:
 - Card: enter your card number, expiry date and security code, then click "**Pay**".
 - Mobile money (e.g. M-Pesa): enter your mobile money number, click "**Pay**", then confirm the payment on your phone with your PIN when prompted.
8. Wait for the confirmation message on screen and on your phone.
9. You should see your new balance on the dashboard immediately.

If the payment fails

1. Check that you typed the card details correctly, and that the card has enough money.
2. For mobile money, make sure your phone number is correct and your phone is switched on to receive the prompt.
3. Try again once. If it still fails, tell your developer and let them top up for you instead.

Once the balance is added, all automated guest messages (confirmations, reminders, thank-yous) start working — nothing else to switch on. These messages are **one-way**: guests cannot reply by text. If a guest has any question, they call the help desk or use WhatsApp, exactly as the hotel handles calls today.

4 · Room & Rate Mapping List **ESSENTIAL**

What this is

Every booking system uses its own names for rooms. This form tells us **which name in your system matches which name on Booking.com**, so prices and availability stay correct. Example: if the system calls a room "Double" and Booking.com calls it "Double Room", you write "Double Room" in the middle column.

Step 1 — Find your room names on Booking.com

1. Log into **admin.booking.com** (same as item 2).
2. In the menu click **"Rooms & Prices"** (sometimes called "Rates & Availability").
3. You will see a list of your room names, e.g. "Standard Double Room", "Deluxe Suite".
4. Write those names down exactly as they appear — spelling matters.

Step 2 — Find your rate plan names

1. On the same page, or under **"Rate Plans"**, you will see rate names such as "BAR" (Best Available Rate), "Non-refundable", or "Breakfast included".
2. Write down the name of the main rate you want guests to book.
3. If you only see one rate, write that one name in all rows.

Step 3 — Fill in the table below

1. For each room type in the left column, write the Booking.com room name in the middle column and the rate plan name in the right column.
2. If a room type does not exist at your hotel, write "N/A" (not applicable) or leave the row blank.
3. If you are unsure about any name, leave it blank — your developer will help you fill it in.

Step 4 — Send it back

1. Take a photo of the completed table (or scan it).
2. Send the photo to your developer with the message: "Here is our room and rate mapping."

ROOM TYPE IN YOUR SYSTEM	BOOKING.COM / STAAH ROOM NAME	RATE PLAN NAME
Single	write it here	write it here
Double	write it here	write it here
Suite	write it here	write it here
Deluxe	write it here	write it here
Presidential	write it here	write it here

5 · Server Whitelist **AFTER ITEM 1**

What you need to do

1. **Nothing.** Once item 1 is active, your developer confirms with STAAH that our server is whitelisted.
2. Your developer will send you a short confirmation when the automatic daily sync is running.

A gentle reminder: you never need to touch technical settings. If you ever feel stuck, take a screenshot and send it to your developer with a short note — they will guide you through the rest live.

04 · Already Handled by Your Developer

- ✓ Channel-manager integration built and under testing (294 tests passing so far)
- ✓ Live server deployed and running — hosting is set up
- ✓ System admin accounts (superadmin / manager) created and working
- ✓ Africa's Talking messaging API configured and authenticated
- ✓ STAAH simulator connectivity tested — waiting on the live keys

05 · Cost Summary (What You Authorize)

ITEM	WHO PAYS	AMOUNT
STAAH channel-manager subscription	You, direct to STAAH	~\$70-80 / month / hotel
SMS credit (Africa's Talking)	You, into the developer-managed account	from ~\$10 (usage-based)
Integration development work	Covered by our agreement	Ongoing

All amounts are estimates provided for budgeting; exact fees are quoted by STAAH and Africa's Talking.

06 · What Happens Once Each Item Arrives

Item 1 + 5 — Live STAAH keys issued & server whitelisted → **we can then make the first live availability push.**

Item 2 — Rooms & rates mirrored → **Booking.com is connected** once STAAH has processed the subscription.

Item 3 — SMS credit added → **automated guest messages start once the balance is added.**

Item 4 — Mapping list received → **each hotel's go-live is completed once received.**

Our request in one line: authorize the STAAH subscription, approve the Booking.com mapping step, fund the SMS account, and send us the room/rate mapping list. We take care of every technical step from there until the hotel is live.

Prepared by your development team for MRK Hotels.

Questions or authorizations: reply to this document with your decisions, or contact your developer directly.
